

# GasSaver Series

Issued January 2021 • Index No. AYM/51.0 UK

## Central System Gas Saving Outlet Points

### Quick Specs

**Processes**  
MIG/TIG

**Gases**  
Argon/Mix

**Flow Range**  
0-34 l/min

**Maximum Inlet Pressure**

10 bar

**Inlet Connection**

G3/8

**Outlet Connection**

G3/8

M12X1

**NEW!**

**Miller® GasSaver Outlet Points are 100-percent tested, inspected, and provide unmatched gas control and accuracy.**

Miller GasSaver Outlet Points are available for use with shielding gases to cover most MIG or TIG welding applications.

GasSaver Outlet Points do greatly reduce the gas surge that normally occurs at start-up.

This saves large amounts of shielding gas and ensures optimum weld quality due to minimized turbulence in the gas flow.

Ready to be mounted on any central system with G3/8 inlet connection. For maximum gas saving, use an inlet pressure of 5 bar.

### Lockable version

GasSaver is also available in a lockable version for exact gas flow. A real advantage if you wish to ensure the highest and most even welding quality, e.g. with ISO 9000 certification.

Miller GasSaver Outlet Point shown in picture.

GasSaver Outlet Points have been developed for qualified shielding gas welding.

The even start flow provides a higher quality weld since you avoid the turbulence that can disturb the welding process. Risk for pores in the welded joint is minimized.

All materials are chosen for long-life operation without downtime and according to standards and regulations.

Shatter-resistant multi-scale flow tube. Tubes are made of shatter-resistant polycarbonate resin for operator safety.
